                                                                                                                                                                                                                                                                                                                                                                                                                                                                               transporter, ABCGS polypeptides and polynucleotides. The invention also provides ABCGS polypeptides and polynucleotides. ABCGS gene is also known as sitosterolaemia susceptibility gene (SSG). Sequences of the invention are useful for treating or preventing sterol-related disorders such as sitosterolaemia, hyperlipidaemia, hypercholesterolaemia, gall stones, HDL deficiency, atherosclerosis and nutritional deficiencies. They are also useful in gene therapy. The present sequence is human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New ABCG8 polypeptides and nucleic acids, useful for treating sterol-related disorders e.g. sitosterolemia, hypercholesterolemia, hyperlipidemia, gall stones, HDL deficiency, atherosclerosis, or nutritional deficiencies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (TULA-)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 13;

P-PSDB;

New transporters and ion channels (TRICH) polypeptides, useful for diagnosing, preventing, and treating disorders associated with an abnormal expression or activity of TRICH, e.g. immunological, muscular or renal disorders

Claim 5; Page 167-168; 178pp; English

The invention relates to human transporters and ion channels (TRICH)
CC polypeptides, a naturally occurring amino acid sequence 90 % identical to
CC TRICH, a biologically active fragment of TRICH or an immunogenic fragment
CC of TRICH. Also included are an isolated polynucleotide encoding TRICH,
CC a recombinant polynucleotide, a cell transformed with the
CC recombinant polynucleotide, a transgenic organism comprising the
CC recombinant polynucleotide, an isolated antibody that binds specifically
CC to TRICH, modulate TRICH expression or are ant/agonists of TRICH, modulate TRICH expression or are ant/agonists of TRICH.
CC The polypeptides are useful for diagnosing, treating, and
CC preventing transport, neurological, muscle, immunological disorders
CC (e.g. scleroderma, systemic lupus erythematosus, allergies), cell
CC proliferative disorders such as cancers (e.g. leukaemia, cervical or
CC proliferative disorders such as cancers (e.g. Parkinson's disease,
CC Alzheimer's disease), muscular disorders (e.g. myotonic dystrophy,
CC gastrointestinal disorders (e.g. Crohn's disease), renal disorders
CC (e.g. Good pasture's syndrome), viral, bacterial, fungal, parasitic,
CC extensions, or hepatic diseases (e.g. cirrhosis) and many
CC other diseases and disorders detailed in the specification. They can also
CC be used in assessing the effects of exogenous compounds on the
CC expression of nucleic acid and amino acid sequences of transporters and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ion channels. TRICH or its fragments may also be used in screening for compounds that specifically bind to and modulate the activity of TRICH. The polynucleotides can be used to create knock-in humanised animals or transgenic animals to model human disease. The present sequence

The polynucleotides of the invention have antiinflammatory activity, and may have a use in gene therapy. The polynucleotide or a polypeptide encoded by it is used for preventing, treating, modulating or ameliorating a medical condition such as ileitis. The polypeptide or polynucleotide is also useful for manufacturing a medicament for treating lieitis. The sequence represents a an extended cDNA digital sequence tag obtained from a mouse clone by the TOGA (total gene expression analysis) method.

The invention also provides ABCGS polypeptides and polynucleotides. ABCGS gene is also known as sitosterolaemia susceptibility gene (SSG). Sequences of the invention are useful for treating or preventing sterol-related disorders such as sitosterolaemia hyperlipidaemia, hypercholesterolaemia, gall stones, HDL deficiency, atherosclerosis and nutritional deficiencies. They are also useful in gene therapy. The present sequence is mouse

cc predisposition for developing sitosterolemia, arteriosclerosis or heart C disease. The molecules of the invention are also useful for identifying ca compound which alters ABCG5 activity level comprising contacting a cell culture or mammal which have ABCG5 polypeptide with a compound and cell culture or mammal which have ABCG5 polypeptide with a compound and comeasuring ABCG5 biological activity in the cell culture or in mammal. C where an increase or decrease in ABCG5 biological activity compared to C ABCG5 biological activity in a control cell culture or mammal not c contacted with the compound, identifies a compound that increases or C decreases ABCG5 activity respectively. The cell culture or mammal c comprises a mutated ABCG5 polypeptide or a wild type polypeptide. The C ABCG5 biological activity, or level of ABCG5 mRNA, or level of the C colliurity or level of ABCG5 mRNA, or level of the C colliurity or mammal is also compared with that of a second cell culture or mammal is also compared with that of a c second cell culture or mammal is also compared with that of a c second cell culture or mammal is also compared with that of a c second cell culture or mammal is also compared with that of a c second cell culture or mammal is also compared with that of a c second cell culture or mammal is also compared with that of a c second cell culture or mammal is also compared with that of a c second cell culture or mammal is also compared with that of a c second cell culture or mammal is also compared with that of a c second cell culture or mammal is also compared with that of a c second cell culture or mammal is also compared with that of a c second cell culture or mammal is also compared with that of a c second cell culture or mammal is also compared with that of a c second cell culture or mammal is also compared with that of a c second cell culture or mammal compared with that of a c second cell culture or mammal or mammal or mammal compared with that of a c second cell culture or mammal compared with that of a 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel mammalian ATP-binding cassette gene 5 polypeptide, an nucleic acid encoding the polypeptide, useful for treating sitosterolemia, arteriosclerosis and heart diseases

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated Sitosterolaemia Susceptibility Gene (SSG) polypeptide. SSG is a member of adenosine triphosphate (ATP) binding cassette (ABC) family cholesterol transporter. SSG is useful for identifying a compound useful in the treatment or prevention of a sterol-related disorder, including sitosterolaemia, hyperlipidaemia, hypercholesterolaemia, gall stones, HDL deficiency, atherosclerosis or nutritional deficiencies. SSG is also useful for treating cholesterol-associated diseases or conditions including coronary heart disease and other cardiovascular diseases, and sitosterolaemia-associated condition including arthritis, xanthomas and chronic haemolytic anaemia. SSG expression cassette is useful in the production of transgenic non-human animals. SSG genes and their homologues are useful as tools for a number of annitarions including disconsions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      of applications including diagnosing sitosterolaemia and other cardiovascular disorders, for forensics and paternity determinations, and for treating any of a large number of SSG associated diseases. The present sequence is human SSG DNA. Human SSG is located on chromosome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  sterol-related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               level of expression or activity of SSG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            日
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ş
                                                             The invention relates to ATP-binding cassette (ABC) family cholesterol transporter, ABCGB polypeptides and polynucleotides. The invention also provides ABCG5 polypeptides and polynucleotides. ABCG5 gene is also known as sitosterolaemia susceptibility gene (SSG). Sequences of the invention are useful for treating or preventing sterol-related disorders such as sitosterolaemia, hyperlipidaemia, hypercholesterolaemia, gall stones, HDL deficiency, atheroscierosis and nutritional deficiencies. They are also useful in gene therapy. The present sequence is human again.
                                                                                                                                                                                                                                                                                                                                                                                 New ABCG8 polypeptides and nucleic acids, useful for treating
sterol-related disorders e.g. sitosterolemia, hypercholesterolemia,
hyperlipidemia, gall stones, HDL deficiency, atherosclerosis, or
nutritional deficiencies -

The method of the invention is useful for increasing cholesterol excretion and/or decreasing cholesterol adsorption. The present nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    where an increase or decrease in ABCG5 biological activity compared to ABCG5 biological activity in a control cell culture or manmal not contacted with the compound, identifies a compound that increases or decreases ABCG5 activity respectively. The cell culture or manmal comprises a mutated ABCG5 polypeptide or a wild type polypeptide. The ABCG5 biological activity, or level of ABCG5 mRNA, or level of the polypeptide in a cell culture or manmal is also compared with that of a second cell culture or manmal is also compared with that of a stimulation of ABCG5 activity is useful for treating or preventing hypersterolemia, arteriosclerosis, heart disease and/or Alzheimer's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to a new mammalian ATP-binding cassette gene 5 (ABCG5) polypeptide. The invention is useful for identifying a predisposition for developing sitosterolemia, arteriosclerosis or heart disease. The molecules of the invention are also useful for identifying a compound which alters ABCG5 activity level comprising contacting a cell culture or mammal which have ABCG5 polypeptide with a compound and measuring ABCG5 biological activity in the cell culture or in mammal,
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence

The cell culture or mammal comprises a mutated ABCG5 polypeptide or a wild type polypeptide. The ABCG5 biological activity, or level of ABCG5 mRNA, or level of the polypeptide in a cell culture or mammal is also compared with that of a second cell culture or mammal is also compared with that of a second cell culture or mammal is also compared with that of a Stimulation of ABCG5 activity is useful for treating or preventing hypersterolemia, arteriosclerosis, heart disease and/or Alzheimer's disease. The method of the invention is useful for increasing cholesterol excretion and/or decreasing cholesterol adsorption. The present nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to a new mammalian ATP-binding cassette gene 5 (ABCG5) polypeptide. The invention is useful for identifying a predisposition for developing sitosterolemia, arteriosclerosis or heart disease. The molecules of the invention are also useful for identifying a compound which alters ABCG5 activity level comprising contacting a cell culture or mammal which have ABCG5 polypeptide with a compound and measuring ABCG5 biological activity in the cell culture or in mammal, where an increase or decrease in ABCG5 biological activity compared to annotation and the compound and the cell culture or in the compound and the cell culture or in the cell culture or in the compound and the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell culture or in the cell cu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Example 3;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel mammalian ATP-binding cassette gene 5 polypeptide, a nucleic acid encoding the polypeptide, useful for treating sitosterolemia, arteriosclerosis and heart diseases

```

The present invention relates to a new mammalian ATP-binding cassette gene 5 (ABCG5) polypeptide. The invention is useful for identifying a predisposition for developing sitosterolemia, arteriosclerosis or heart disease. The molecules of thorention are also useful for identifying a compound which alters ABCG5 activity level comprising contacting a cell culture or mammal which have ABCG5 polypeptide with a compound and measuring ABCG5 biological activity in the cell culture or in mammal, where an increase or decrease in ABCG5 biological activity compared to ABCG5 biological activity in a control cell culture or mammal not contacted with the compound, identifies a compound that increases or decreases ABCG5 activity respectively. The cell culture or mammal mathematical activity respectively. The cell culture or mammal mathematical culture or mammal culture o

Stimulation of ABCG5 activity is useful for treating or preventing hypersterolemia, arteriosclerosis, heart disease and/or Alzheimer's disease. The method of the invention is useful for increasing cholesterol excretion and/or decreasing cholesterol adsorption. The present nucleic

                                                                                                                      The invention relates to ATP-binding cassette (ABC) family cholesterol transporter, ABCG8 polypeptides and polypucleotides. The invention also provides ABCG5 polypeptides and polypucleotides. ABCG5 gone is also known as sitosterolaemia susceptibility gene (SSG). Sequences of the invention are useful for treating or preventing sterol-related disorders such as sitosterolaemia, hyperlipidaemia, hypercholesterolaemia, gall stones, HDL deficiency, atheroscierosis and nutritional deficiencies.
                                                                                                                                                                                                                                                                                                                                                                                            Claim 11; Page 73;
                                                                                                                                                                                                                                                                                                                                                                                                                                                  New ABCG8 polypeptides and nucleic acids, useful for treating sterol-related disorders e.g. sitosterolemia, hypercholesterolemia, hyperlipidemia, gall stones, HDL deficiency, atherosclerosis, or nutritional deficiencies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ABC family cholesterol transporter; ABCG8; sterol-related disorder; sitosterolaemia; hyperlipidaemia; hypercholesterolaemia; gall stone; HDL deficiency; atherosclerosis; nutritional deficiency; gene therapy; mouse; ATP-binding cassette; sitosterolaemia susceptibility gene; SSG; ABCG5; gene; ds.

The invention relates to an isolated Sitosterolaemia Susceptibility Gene (C (SSG) polypeptide. SSG is a member of adenosine triphosphate (ATP) c binding cassette (ABC) femily cholesterol transporter. SSG is useful C for identifying a compound useful in the treatment or prevention of a CC sterol-related disorder, including sitosterolaemia, hyperlipidaemia, c hypercholesterolaemia, gall stones, HDL deficiency, atherosclerosis or nutritional deficiencies. SSG is also useful for treating cholesterol-c associated diseases or conditions including coronary heart disease and c other cardiovascular diseases, and sitosterolaemia-associated condition including arthritis, xanthomas and chronic haemolytic anaemia. SSG expression cassette is useful in the production of transgenic non-human C animals. SSG genes and their homologues are useful as tools for a number C of applications including diagnosing sitosterolaemia and other cardiovascular disorders, for forensics and paternity determinations, and for treating any of a large number of SSG associated diseases. The present sequence is mouse SSG DNA. Mouse SSG is located on chromosome 17.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel sitosterolemia susceptibility gene polypeptide and polynucleotide, useful for screening a compound that increases the level of expression or activity of SSG polypeptide for treating
                                                                                                                                                                                                                                                                                                                                                                                                            Claim 8; Fig 7; 105pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                         sterol-related disorder
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (TULA-)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      18-APR-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              D
The present invention relates to a new mammalian ATP-binding cassette gene 5 (ABCG5) polypeptide. The invention is useful for identifying a predisposition for developing sitosterolemia, arteriosclerosis or heart disease. The molecules of the invention are also useful for identifying a compound which alters ABCG5 activity level comprising contacting a cell culture or mammal which have ABCG5 polypeptide with a compound and measuring ABCG5 biological activity in the cell culture or in mammal, where an increase or decrease in ABCG5 biological activity compared to ABCG5 biological activity in a control cell culture or mammal not contacted with the compound, identifies a compound that increases or
                                                                                                                                                                                                                                  Novel mammalian ATP-binding cassette gene 5 polypeptide, a nucleic acid encoding the polypeptide, useful for treating sitosterolemia, arteriosclerosis and heart diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WO200227016-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      arteriosclerosis;
                                                                                                                                                                                                          Example 3;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    decreases ABCG5 activity respectively. The cell culture or mammal comprises a mutated ABCG5 polypeptide or a wild type polypeptide. The ABCG5 biological activity, or level of ABCG5 mRNA, or level of the polypeptide in a cell culture or mammal is also compared with that of a second cell culture or mammal comprising a wild type ABCG5 polypeptide. Stimulation of ABCG5 activity is useful for treating or preventing hypersterolemia, arteriosclerosis, heart disease and/or Alzheimer's disease. The method of the invention is useful for increasing cholesterol excretion and/or decreasing cholesterol adsorption. The present nucleic acid sequence represents the CDNA sequence of the mouse ABCG5 gene of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 2354 BP; 573 A; 604 C;

The present invention relates to a new mammalian ATP-binding cassette CC gene 5 (ABCG5) polypeptide. The invention is useful for identifying a cCC disease. The molecules of the invention are also useful for identifying a CCC disease. The molecules of the invention are also useful for identifying CCC culture or mammal which have ABCG5 balypeptide with a compound and CCC measuring ABCG5 biological activity in the cell culture or in mammal. CCC where an increase or decrease in ABCG5 biological activity in the compound that increases or contacted with the compound, identifies a compound that increases or cCC contacted with the compound, identifies a compound that increases or CCC comprises a mutated ABCG5 polypeptide or a wild type polypeptide. The CCC ABCG5 biological activity respectively. The cell culture or mammal CCC ABCG5 biological activity or level of ABCG5 mRNA, or level of the CCC second cell culture or mammal is also compared with that of a Second cell culture or mammal is also compared with that of a Second cell culture or mammal is also compared with that of a Stimulation of ABCG5 activity is useful for treating or preventing CCC disease. The method of the invention is useful for increasing cholesterol cativity entered activity is useful for increasing cholesterol ascide sequence encodes the hammater abCG5 polypeptide.
